# ASTM G21-15

Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi

FINAL REPORT: R2021-296-1

Prepared for:
Caesarstone
Kibbutz Sdot-Yam MP

Accredited Testing Provided by:

130 Erick Street Crystal Lake, IL 60014 815.526.0954 TESTING CERT: #2832.01

Testing Initiated: April 22, 2021 Testing Completed: May 20, 2021 Report Issued: May 25, 2021

Performed By: Agata Shulfer Approved By: Debbie Koester Title: Senior Staff Scientist Title: Quality Manager

## **Objective:**

To evaluate the mold resistance properties of three samples as seen in the ASTM G21 fungal resistance test.

## **Test Sample Identification:**

Caesarstone Quartz:

- 1. 2003H Quartz
- 2. 2003P Quartz
- 3. 4033RC Quartz

## **Test Procedure Summary:**

Samples are placed onto the surface of ASTM G21 nutrient salts agar and sprayed with a mixed spore suspension of five fungal strains. The nutrient salts agar provides all of the trace nutritional elements needed by fungi to support growth. However, to achieve a heavy growth, the fungi must use the test material as its primary carbon source. Inoculated samples are incubated and then examined for fungal growth.

### Test Variables

Test Organisms:	Aspergillus brasiliensis¹ ATCC 9 Talaromyces pinophilus ² ATCC 1 Chaetomium globosum ATCC 6 Trichoderma virens³ ATCC 9 Aureobasidium pullulans ATCC 1	1797 205 645	
Sample Description:	2" x 2" pieces		
Test Surface:	Polished side		
Number of Replicates per Sample:	Three		
Positive Growth Control:	Sterile Filter Paper		
Media Used:	Nutrient-Salts Agar prepared according to standard		
<b>Environmental Conditions:</b>	28 - 30°C; ≥85% relative humidity		
Incubation Duration:	28 days		
Deviations from Standard Test Method:	None, testing performed per ASTM G21 without deviation.		

<sup>&</sup>lt;sup>1</sup> Aspergillus brasiliensis formerly classified as Aspergillus niger

<sup>&</sup>lt;sup>2</sup> Talaromyces pinophilus formerly identified as Penicillium funiculosum

<sup>&</sup>lt;sup>3</sup> Trichoderma virens formerly classified as Gliocladium virens

### **Results:**

The results for the test pieces can be found in the data table below. The filter paper control pieces had copious fungal growth at Day 14. Temperature and relative humidity were maintained for the duration of the test. These results pertain only to the samples tested.

At week 4, samples rating a "0" or "1" were examined microscopically to confirm the ratings.

The rating scale for this test is as follows:

Rating	Observed Growth				
0	No Growth				
1	Trace of Growth (less than 10% coverage)				
2	Light Growth (10-30% coverage)				
3	Medium Growth (30-60% coverage)				
4	Heavy Growth (60-100% coverage)
